Non-destructive testing of welds

Part 2: Evaluation of welded joints in aluminium and its alloys by radiography — Acceptance levels
National foreword

This British Standard is the UK implementation of EN 12517-2:2008. The UK participation in its preparation was entrusted to Technical Committee WEE/46, Non-destructive testing.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.
Non-destructive testing of welds - Part 2: Evaluation of welded joints in aluminium and its alloys by radiography - Acceptance levels

This European Standard was approved by CEN on 18 July 2008.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This document (EN 12517-2:2008) has been prepared by Technical Committee CEN/TC 121 “Welding”, the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by February 2009, and conflicting national standards shall be withdrawn at the latest by February 2009.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

EN 12517 Non-destructive testing of welds comprises a series of European Standards for acceptance levels for radiographic testing which is made up of the following parts:

— Part 1: Evaluation of welded joints in steel, nickel, titanium and their alloys by radiography — Acceptance levels

— Part 2: Evaluation of welded joints in aluminium and its alloys by radiography — Acceptance levels

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.
1 Scope

This European Standard specifies acceptance levels for indications from imperfections in aluminium butt welds detected by radiographic testing. If agreed, the acceptance levels may be applied to other types of welds or materials.

The acceptance levels may be related to welding standards, application standards, specifications or codes.

This European Standard assumes that the radiographic testing has been carried out in accordance with EN 1435.

When assessing whether a weld meets the requirements specified for a weld quality level, the sizes of imperfections permitted by standards are compared with the dimensions of indications revealed by a radiograph made of the weld.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 1435, Non-destructive examination of welds — Radiographic examination of welded joints

3 Radiographic technique

Depending on the weld quality level, radiographic technique A or B in accordance with EN 1435 shall be used as shown in Table 1.

<table>
<thead>
<tr>

a However, the minimum number of exposure for circumferential weld testing may correspond to the requirements of class A of EN 1435.
4 General

Welded joints should be visually tested in accordance with EN 970 and evaluated before radiographic testing.

The acceptance levels in this European Standard are basically valid for evaluation of imperfections which cannot be detected and evaluated by visual testing (Table 2). Surface imperfections (Table 3; such as undercut and excessive penetration, surface damage, weld spatter, etc.) which due to object geometry cannot be evaluated, but where the interpreter suspects the EN ISO 10042 quality levels are not fulfilled, shall be subject to more specific testing.

When quantification of undercut and/or excessive penetration by radiographic testing is required, specific procedures using test exposures may be applied in order to establish a basis for approximate quantification in accordance with the requirements of EN ISO 10042. This shall be specified.

5 Acceptance levels

The acceptance levels for indications are shown in Tables 2 and 3. The types of imperfections are selected from EN ISO 10042 and defined in EN ISO 6520-1.

The symbols used in Tables 2 and 3 are the following:

- $A$: sum of projected areas of indications related to $L \times w_p$ in %;
- $b$: width of excess penetration of weld, in millimetres;
- $d$: diameter of pore, in millimetres;
- $d_A$: diameter of area surrounding a cluster, in millimetres;
- $h$: width of indication, the width or height of surface or cross surface imperfection, in millimetres;
- $l$: length of indication, in millimetres;
- $L$: any 100 mm testing length, in millimetres;
- $s$: nominal butt weld thickness, in millimetres;
- $t$: material thickness, in millimetres;
- $w_p$: width of the weld in millimetres;
- $\Sigma l$: summary length of imperfections within $L$.

Any two adjacent imperfections separated by a distance smaller than the major dimension of the smaller imperfection shall be considered as a single imperfection.

Indications shall not be divided into different ranges $L$.

</tr>
</tbody>
</table>

a Acceptance levels 3 and 2 may be specified with suffix X which denotes that all indications over 25 mm are unacceptable.

b See Annex C, Figure C.1 and Figure C.2 (normative).

c See Annex C, Figure C.3 and Figure C.4 (normative).

d See Annex C, Figure C.5 and Figure C.6 (normative).

e If the length of the weld is below 100 mm, the maximum length of indications shall not exceed 25 % of that weld.

</tbody>
</table>

\(^{a}\) Acceptance levels 3 and 2 may be specified with suffix X which denotes that all indications over 25 mm are unacceptable.
Annex A
(informative)

Guide to the limitations of radiographic testing1)

A.1 Volumetric imperfections in butt welds
Wormholes and elongated cavities (2016 and 2015)
Oxide inclusions (303)
Tungsten inclusions (3041)

The above imperfections listed in Table 2 will be readily detected using radiographic technique A or B of EN 1435 as shown in Table 1 of this European Standard.

A.2 Cracks in butt welds
Crater cracks (104)
Cracks (100)

The detectability of cracks by radiographic testing depends on the crack height, the ramification (presence of branching parts), opening width, direction of the X-ray beam to crack orientation and radiographic technique parameters.

Reliable detection of all cracks is therefore limited. The use of radiographic technique B or better, as specified in EN 1435, will provide better crack detectability than radiographic technique A.

A.3 Planar imperfections in butt welds
Lack of fusion (401)
Lack of penetration (402)

The detection of lack of fusion and lack of penetration depends on characteristics of imperfections and radiographic technique parameters.

Lack of side wall fusion will probably not be detected (except it is associated with other imperfections such as slag inclusions) unless it is radiographed in direction of the side wall.

1) The numbers between brackets conform to those used in EN ISO 6520-1.
Annex B
(informative)

Examples for determination of percentage (%) of imperfections

The following figures give a presentation of different area percentage (%) of imperfections. This should assist the assessment of imperfections on radiographs and fracture surfaces.

Figure B.1 — 1 %

Figure B.2 — 2 %

Figure B.3 — 3 %

Figure B.4 — 4 %

Figure B.5 — 6 %
Annex C (informative)

Sum of acceptable areas

The sum of the different pore areas ($A_1$+${A}_2$,...) related to the evaluation area $L \times w_p$ (Figure C.1).

If $D$ is less than $d_{A1}$ or $d_{A2}$, whatever is smaller, an envelope surrounding the porosity area $A_1$+${A}_2$ shall be considered as one area of imperfection (Figure C.2).

Figure C.1 — Clustered porosity, $D > d_{A2}$

Figure C.2 — Clustered porosity, $D \leq d_{A2}$

Figure C.3 — Linear porosity, $D > d_2$
The sum of the different pore areas \( \frac{d_1^2 \times \pi}{4} + \frac{d_2^2 \times \pi}{4} + \ldots \) related to the evaluation area \( L \times w_p \) (Figure C.3).

If \( D \) is smaller than the smaller diameter of one of the neighbouring pores, the full connected area of the two pores is to be taken into the sum of imperfections (Figure C.4).

The sum of the length of indications \( \Sigma l \) shall be determined for each testing length \( L \) (Figure C.5).

If \( D \) is smaller than the shorter length of one of the neighbouring imperfections, the full connection of the two imperfections is to be taken into the sum of imperfections (Figure C.6).

BSI - British Standards Institution

BSI is the independent national body responsible for preparing British Standards. It presents the UK view on standards in Europe and at the international level. It is incorporated by Royal Charter.

Revisions

British Standards are updated by amendment or revision. Users of British Standards should make sure that they possess the latest amendments or editions.

It is the constant aim of BSI to improve the quality of our products and services. We would be grateful if anyone finding an inaccuracy or ambiguity while using this British Standard would inform the Secretary of the technical committee responsible, the identity of which can be found on the inside front cover. Tel: +44 (0)20 8996 9000. Fax: +44 (0)20 8996 7400.

BSI offers members an individual updating service called PLUS which ensures that subscribers automatically receive the latest editions of standards.

Buying standards

Orders for all BSI, international and foreign standards publications should be addressed to Customer Services. Tel: +44 (0)20 8996 9001. Fax: +44 (0)20 8996 7001 Email: orders@bsigroup.com You may also buy directly using a debit/credit card from the BSI Shop on the Website http://www.bsigroup.com/shop

In response to orders for international standards, it is BSI policy to supply the BSI implementation of those that have been published as British Standards, unless otherwise requested.

Information on standards

BSI provides a wide range of information on national, European and international standards through its Library and its Technical Help to Exporters Service. Various BSI electronic information services are also available which give details on all its products and services. Contact Information Centre. Tel: +44 (0)20 8996 7111 Fax: +44 (0)20 8996 7048 Email: info@bsigroup.com

Subscribing members of BSI are kept up to date with standards developments and receive substantial discounts on the purchase price of standards. For details of these and other benefits contact Membership Administration. Tel: +44 (0)20 8996 7002 Fax: +44 (0)20 8996 7001 Email: membership@bsigroup.com

Information regarding online access to British Standards via British Standards Online can be found at http://www.bsigroup.com/BSOL

Copyright

Copyright subsists in all BSI publications. BSI also holds the copyright, in the UK, of the publications of the international standardization bodies. Except as permitted under the Copyright, Designs and Patents Act 1988 no extract may be reproduced, stored in a retrieval system or transmitted in any form or by any means – electronic, photocopying, recording or otherwise – without prior written permission from BSI.
